

How to use **stickers** in Presentations

Stickers offer a flexible way to visually communicate progress or status in a presentation.

By using different sticker labels, you can effectively convey the information and keep the audience updated about the current state of the material being presented.

Place Sticker Here

vz Place the stickers or labels prominently on the content, such as the cover page or header/footer area, so they are easily visible to the audience.

Or Here

Examples of some common stickers

Preliminary

This sticker indicates that the content is in the early stages and may still be subject to further development.

Work in Progress

This sticker indicates that the content is still being worked on , and material is not yet complete or finalized.

Indicative

This sticker implies that numbers are not 100% accurate, but it provides a general direction of the big picture.

Needs Review

This sticker indicates that presentation requires review from stakeholders or SMEs to provide feedback or approval.

Pending

It signifies that there is an outstanding task associated with the material that is awaiting action or decision.

Hold

This sticker implies that there is a pause or delay in the development or use of the material.

Confidential

This sticker indicates that content is sensitive / confidential, and access is to be limited to authorized individuals only.

Revised

This sticker indicates that presentation has been updated from a previous version. It helps identify the most recent iteration of the document.

Final

This sticker signifies that content that has undergone all necessary revisions and is now in its final form, ready for use or distribution.

Urgent

This sticker highlights (parts of) content that requires immediate action. It helps draw attention to time-sensitive content.

Approved

This sticker signifies that the content has been reviewed and approved by the necessary parties.

Illustrative

This sticker implies that numbers shown are hypothetical, just to express the relationship among variables.
